

## Scott Automation – Solution Design Engineer Presales

### **Solution Design Engineer Presales**

As a Solution Design Engineer, you will be part of the Sales Support Team and will support our sales engineers in complex international projects.

You will analyse technical customer queries, check and validate basic data, perform capacity calculations and translate this into well-thought-out concepts and 2D layouts. In addition, you will make global cost price calculations and help monitor the technical accuracy and margins of our quotations.

You will work closely with sales and engineering and act as a critical but constructive sparring partner.

#### Your tasks

- You will analyse and validate technical input (Excel, basic data, calculations).
- You will perform capacity and feasibility calculations.
- You will develop concepts and 2D layouts in AutoCad.
- You will make global cost calculations using an internal tool.
- You will advise the sales engineers on technical matters.

#### Your profile

- Bachelor's degree in (Electrical) Mechanical Engineering or equivalent through experience.
- Technical background in mechanics and/or automation.
- Good knowledge of (technical) French and English.
- Knowledge of AutoCad 2D or similar.
- Analytical and creative thinking skills.
- Assertive, proactive and structured.
- Willing to travel occasionally within Europe.

When you choose Scott Automation, you are choosing an international group with top clients, where the entire engineering and production process is handled in-house. You will be joining a dynamic corporate culture where our employees are our top priority.

#### We offer:

- Attractive remuneration based on your experience and skills;
- Supplemented by fringe benefits such as: company car, group insurance, hospitalisation insurance, mobile phone, laptop, meal vouchers
- International working environment
- Flexible working hours
- Working time reduction days
